Min= 0.000 at (10,1), Max= 169.320 at (126,65)

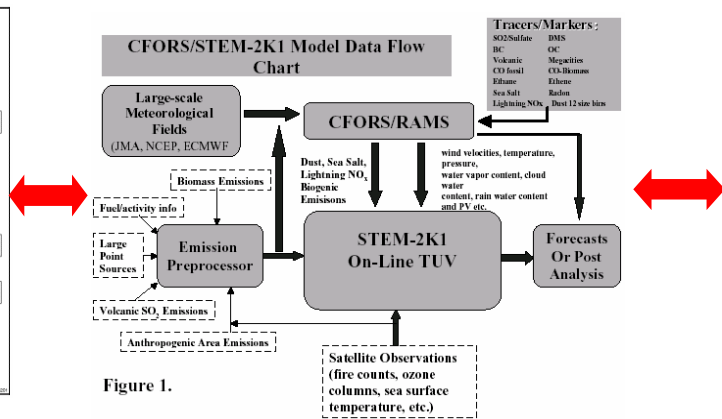

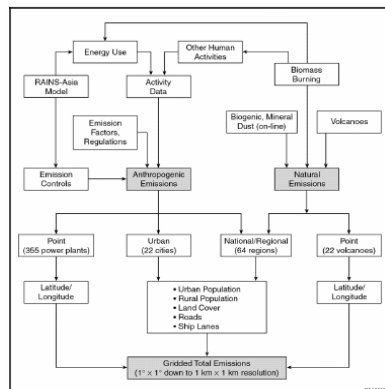

Figure 1.

## Surface

## Aircraft

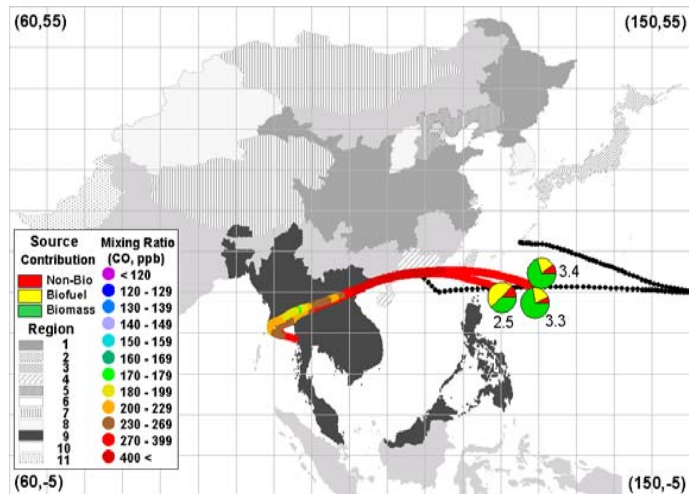

**What does this tell us?**

—

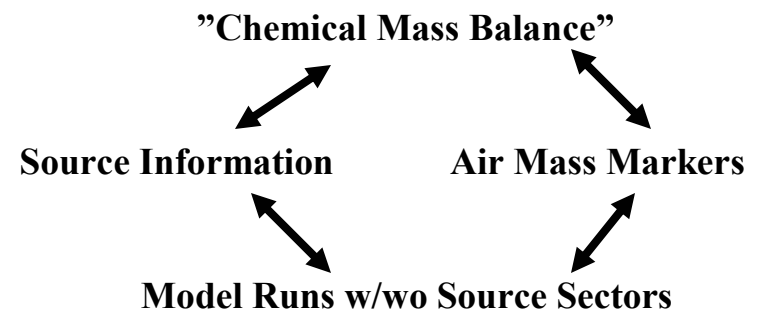

**Model deficiency?**

**Emissions problem?**

**extinction**

## The Informatics Problem:

<b>ABC/ΔCO</b>		<b>Ratio</b>	<b>R-square</b>
<b>Shanghai</b>	<b>Obs</b>	<b>0.0107</b>	<b>0.9556</b>
	<b>Model</b>	<b>0.0092</b>	<b>0.8772</b>
	<b>Emission</b>	<b>0.0083</b>	
<b>Tianjian</b>	<b>Obs</b>	<b>0.0102</b>	<b>0.8266</b>
	<b>Model</b>	<b>0.0084</b>	<b>0.6412</b>
	<b>Emission</b>	<b>0.014</b>	
<b>Tokyo</b>	<b>Obs</b>	<b>0.0226</b>	<b>0.8793</b>
	<b>Model</b>	<b>0.0205</b>	<b>0.9412</b>
	<b>Emission</b>	<b>0.0193</b>	
<b>Pusan</b>	<b>Obs</b>	<b>-0.016</b>	<b>0.06351</b>
	<b>Model</b>	<b>0.0072</b>	<b>0.3258</b>
	<b>Emission</b>	<b>0.0159</b>	
<b>Qingdao</b>	<b>Obs</b>	<b>0.0186</b>	<b>0.02618</b>
	<b>Model</b>	<b>0.0076</b>	<b>0.7707</b>
	<b>Emission</b>	<b>0.0148</b>	

Trajectory statistics for 5 days back trajectory along C130 flight path  
that pass through Megacities : classified by aging

**This analysis suggests  
directions to look for  
improvements**

# Is it the Domestic Sector?

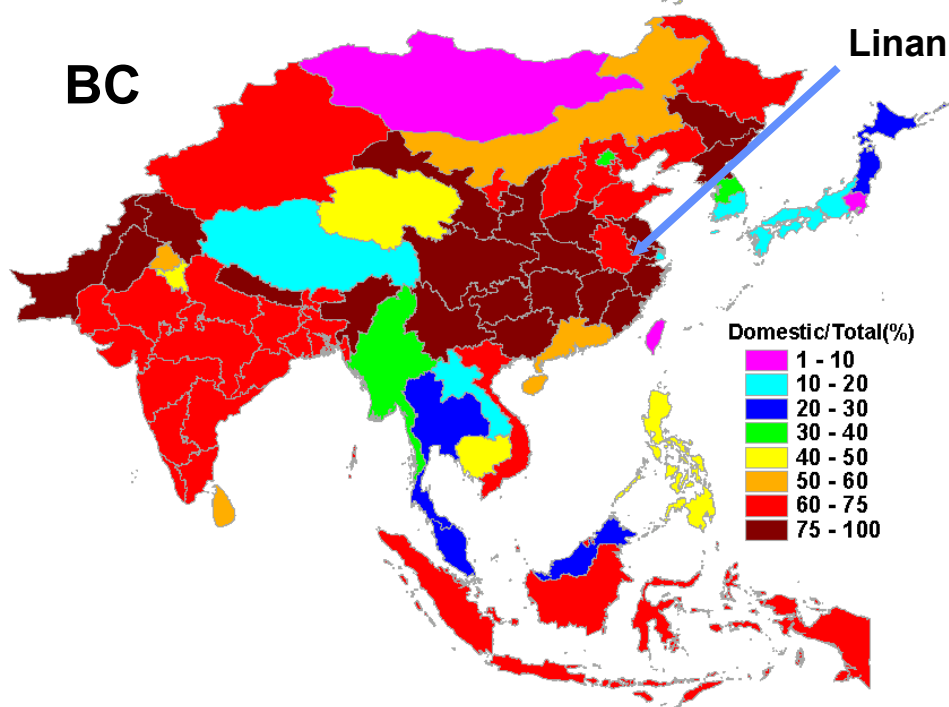

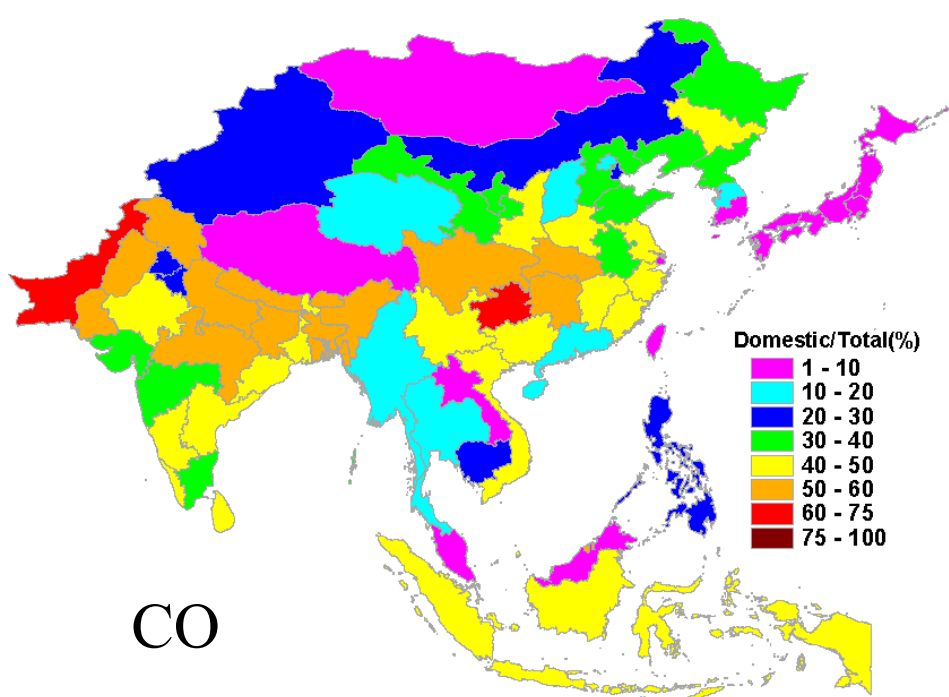

Table 4. Domestic sector emissions by fuel for 2000 (annual basis).

Chemical Species	Domestic sector			% of Domestic to Total Emissions
	Fossil	Biofuel	Sum	
SO <sub>2</sub> (Gg)	2549	1116	3665	11
NO <sub>x</sub> (Gg)	795	1098	1894	7
CO(Gg)	8899	95721	104621	38
CO <sub>2</sub> (Tg)	552	2132	2685	27
BC(Gg)	337	1294	1631	64
OC(Gg)	273	6473	6746	65

Table 3. Linan data

Species and Variables	Observed
CO (ppbv)	649.26
SO <sub>2</sub> (ppbv)	16.49
NO <sub>y</sub> (ppbv)	13.24
BC (μg/m <sup>3</sup> )	3.5
OC (μg/m <sup>3</sup> )	44

*Clarke et al., (in press)*

## New methodology and data

New methodology for industry, domestic and transport sector

New available activity data for 2001

## Link with Control Strategy

Need to know the detail within sectors

## Information from chemical modeling results

Inverse studies (using surface, aircraft data, and satellite data) for CO showing  
a ~40% Underestimation of Current Estimates

- **Small Coal Mines and Small Industries**

- 170 Million tons difference between coal supply and coal consumptions

- **Efficiency of Combustion Device**

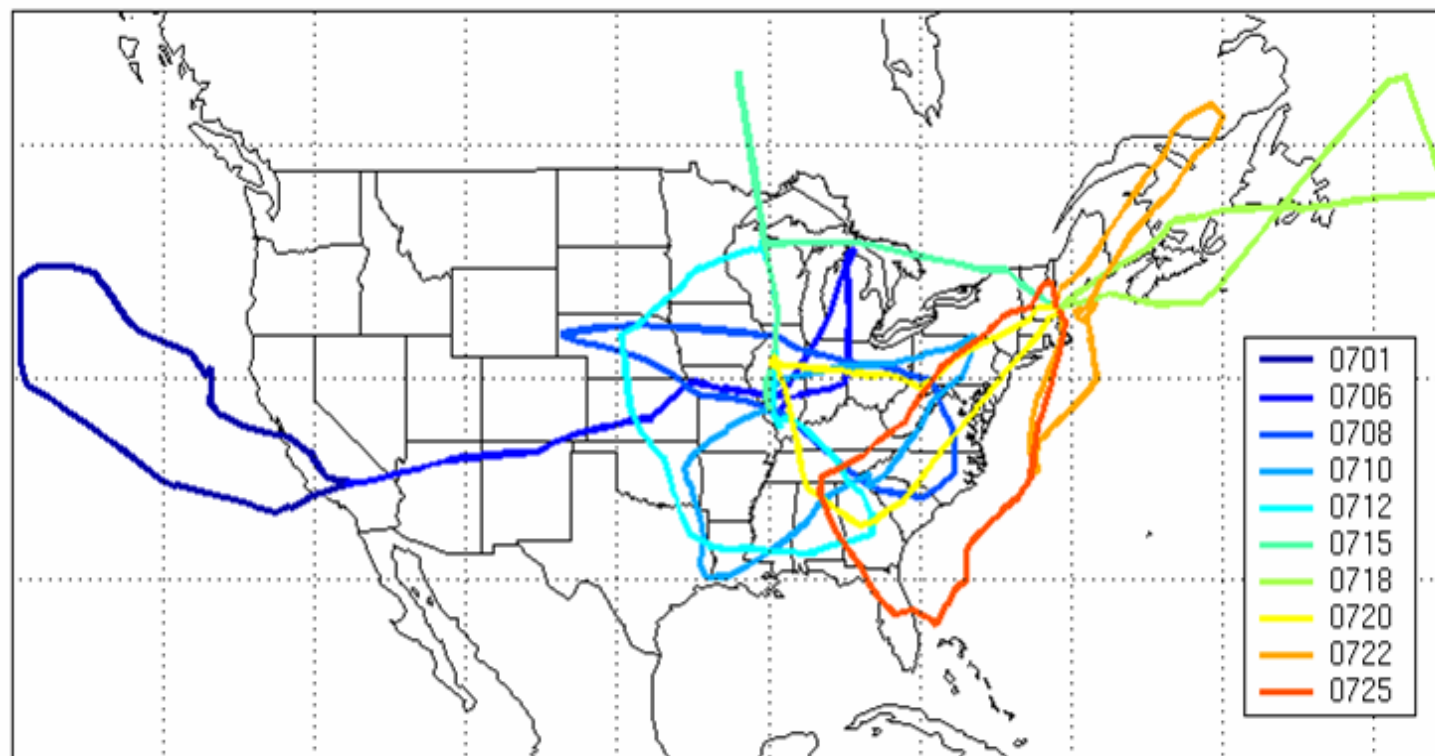

- Which impact BC, OC, CO and VOC emissions
- Important for control potential

- **34% higher compared with Trace-P inventory**
- **73% of increase comes from industrial sector**
- **Key reason: low combustion efficiency**
- **Results in a ‘consistent’ regional changes**
- **Implications for BC, OC and VOC? – *the next step***

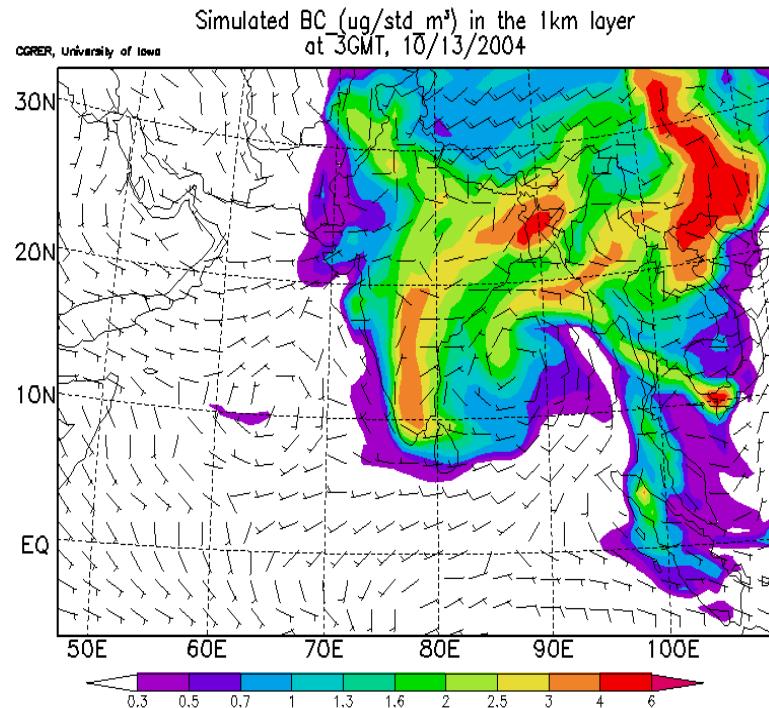

## NASA INTEX DC-8 flight in July

## ICARTT/INTEX-A DC-8 flight 7 on 07/08/2004

Sulfate is measured by Jack Dibb, University of New Hampshire, and aerosol optical properties are measured by Antony Clarke, University of Hawaii

## STEM Forecast Webpage for APMEX
